PROFESSIONAL SUMMARY

Backend Java Developer with 3 years of experience building scalable enterprise applications in Fintech domain. Strong expertise in Java, Spring Boot, Microservices, REST APIs, and SQL. Experienced in payment systems, production support, and high-availability backend services.

KEY SKILLS

Languages / Frameworks: Java 8+, Spring Boot, REST APIs, Microservices Architecture.

Databases: MySQL, Oracle SQL.

Cloud / Architecture: AWS (EC2, S3, IAM, RDS, CloudWatch, Load Balancer).

Tools: Git, GitHub, Postman, Eclipse, Visual Studio.

Backend / Enterprise Concepts: Exception Handling, API Integration, UAT & Production Deployment, Code Refactoring, Debugging & Troubleshooting.

PROFESSIONAL EXPERIENCE

Software Engineer

In-Solutions Global Ltd

June 2023 – Present

Mumbai, India

- Developed scalable backend services using Java, Spring Boot, and Microservices architecture for Credit Card Management System in Fintech domain.
- Designed and implemented RESTful APIs for EMI Management, Soundbox Integration and Digital Document Execution (DDE) modules.
- Built Soundbox Integration APIs including TID list, onboarding, and merchant reporting, improving provisioning time by 20% and reporting accuracy by 35%.
- Developed EMI Management APIs to fetch eligible transactions and automate EMI conversion, reducing manual effort by 40%.
- Implemented Role-Based Access Control (RBAC) to enhance application security and reduce unauthorized access incidents.
- Developed Digital Document Execution (DDE) APIs for post card-activation acknowledgment and e-sign workflow.
- Integrated third-party services and ensured secure communication using REST APIs and exception handling mechanisms.
- Refactored legacy modules and optimized backend logic, improving system performance and maintainability by 30–35%.
- Conducted API testing and debugging using Postman, improving API reliability and stability.
- Collaborated with cross-functional teams including QA, Business Analysts, and UI teams to ensure smooth UAT and production releases.
- Supported deployment activities in UAT and production environments ensuring smooth feature rollout.
- Maintained application logs and monitoring, ensuring system stability and performance.
- Contributed to improving code quality, technical documentation, and API lifecycle management.
- Participated in Data Center (DC) and Disaster Recovery (DR) activities to ensure high availability and business continuity.
- Performed password encryption and credential rotation during DC/DR activities.
- Took application backups and configurations prior to DC/DR switch activities.
- Deployed applications from DC to DR environment during DR activities ensuring minimal downtime.
- Performed reverse deployment from DR to DC during restoration activities.
- Monitored application logs post deployment to ensure successful failover and system stability.
- Provided production support during critical deployment windows and performed root cause analysis.

PROJECTS

Credit Card Management System (CCMS)

Credit Card Management System is an enterprise-level banking application used for managing credit card lifecycle operations including card onboarding, EMI conversion, merchant integrations, role-based access management, and digital document execution. The system is designed using microservices architecture to support scalable and secure banking operations.

Technologies Used:

Java, Spring Boot, Microservices, REST APIs, Oracle SQL, Postman.

Key Contributions:

Soundbox Integration

Soundbox Integration enables merchants to receive real-time audio notifications for credit card transactions using soundbox devices.

Responsibilities:

- Developed APIs for TID list retrieval, Soundbox onboarding, and merchant reporting
 - Implemented exception handling and logging mechanisms for improved reliability
 - Integrated backend services with merchant onboarding workflows
 - Improved provisioning time by 20% and enhanced reporting accuracy by 35%
-

EMI Management System

EMI Management module allows customers to convert credit card transactions into EMI plans.

Responsibilities:

- Developed APIs to fetch eligible transactions for EMI conversion
 - Implemented backend logic to automate EMI scheduling
 - Built APIs for EMI conversion and tracking
 - Reduced manual processing effort by 40% through automation
-

DDE Integration (Digital Document Execution)

DDE module enables digital acknowledgment and document execution after credit card activation.

Responsibilities:

- Developed workflow for post card-activation digital acknowledgment
 - Enabled bank users to initiate, re-initiate, check status, and download DDE documents
 - Integrated e-sign workflow for customer acknowledgment
 - Automated acknowledgment process to confirm successful card activation
-

EDUCATION

Nadimpalli Satyanarayana Raju Institute of Technology

B.Tech in Electronics and Communication Engineering (CGPA: 7.3/10)

2018 – 2022

Visakhapatnam, India

CERTIFICATIONS

Master Spring Boot 3 & Spring Framework 6 with Java – Udemy

ACHIEVEMENTS

- Successfully delivered multiple fintech modules including Soundbox, EMI, RBAC, and DDE
- Improved system maintainability by refactoring legacy modules
- Received appreciation for delivering production-critical features within sprint timelines
- Implemented RBAC to enhance application security and access control
- Provided production support and resolved critical backend issues
